Suraj Jaybhaye

Full-Stack Developer @ Invade Code Ltd. | Next.js, TypeScript, Node.js | Building AI-powered web apps | COEP CSE
Pune District, Maharashtra, India

Summary

I’m a Full-Stack Developer focused on building scalable web applications, backend systems, AI-powered products, and workflow automations.Currently, I work as an Associate FullStack Developer at Invade Code Ltd., where I work across the stack using Next.js, TypeScript, Firebase, and Firestore. I’ve owned features end-to-end—from understanding requirements and designing solutions to development, debugging, and deployment—on a multi-tenant ERP platform serving 20+ branches and handling 1,000+ daily record updates.I also enjoy solving problems beyond conventional application development. I’ve built AI-powered systems using RAG, vector search, Elasticsearch, OCR, and LLMs, as well as backend systems with Java and Spring Boot. One of my projects, GovIntel, combines hybrid retrieval and LLMs to make large collections of government documents searchable and useful in seconds. I’ve also built an offline payment settlement system demonstrating encrypted, exactly-once transaction processing.On the automation side, I’ve built n8n workflows that connect Gmail and LinkedIn to automate job-posting workflows, reducing a 20–30 minute manual process to under a minute.Tech I work with: Java, Python, JavaScript, TypeScript, React, Next.js, Node.js, Spring Boot, REST APIs, PostgreSQL, MySQL, Firebase, Firestore, Docker, AWS, Redis, RAG, Qdrant, Elasticsearch, LLMs, Git, and n8n.I’m particularly interested in building reliable products, distributed/backend systems, AI applications, and automation that solve real-world problems.

Experience

Invade Code Ltd.
Full Stack Developer
January 2026 - Present (9 months)
Pune, Maharashtra, India

Nebula Technology
Software Developer
September 2024 - March 2025 (7 months)
Pune District

• Developed a Bank Management System with secure login, transactions, and dashboard using React, Node.js, Express, and PostgreSQL.
• Implemented JWT-based authentication, modular APIs, and responsive UI for client operations.
• Deployed backend services on AWS EC2 with CI/CD integration via GitHub Actions.
• Collaborated with a cross-functional team using Agile methods; delivered features before sprint deadlines.
• Enhanced API efficiency and reduced latency by ~20% through query optimization.

Education

COEP Technological University
Bachelor of Technology - BTech, Computer Engineering · (2020 - 2024)

Residential Junior College
HSC, Science · (2018 - 2020)
